

## Black Underfelt Fabric

### Available Colours:

Black

Product code:	KBT13519
<b>Selected Colour:</b>	<b>Black</b>
Width:	150cm
Price:	£6.99/mtr

### Description:

Black underfelt fabric is a multifunctional material with applications ranging from flooring underlay and sound insulation to protective padding, lining and upholstery. Its versatility, combined with its cushioning and insulating properties, makes it an invaluable resource in various industries, contributing to comfort, safety, and efficiency in numerous settings.

Face of fabric is fleece finished

### Fabric Specification

- Fabric Width: 150cm
- Construction: Non-woven
- Composition : Polypropylene synthetic
- Fabric weight: 150 gsm/M sq.
- Thickness: 0.75mm - 1.5mm

This underfelt fabric is versatile material and commonly used in various industries for its cushioning, insulating, and protective properties.

### Here are some of its primary uses and applications:

#### 1. Carpet Underlay

Black underfelt fabric is widely used as an underlay for carpets. It provides a soft cushioning layer that enhances comfort underfoot and extends the lifespan of the carpet by absorbing the impact of foot traffic.

#### 2. Sound Insulation

Due to its dense and fibrous structure, black underfelt is an effective sound insulator. It is often installed under flooring in residential and commercial buildings to reduce noise transmission between floors and rooms.

### **3. Thermal Insulation**

Black underfelt fabric also acts as a thermal insulator. It helps to maintain indoor temperatures by providing a barrier against cold floors, making it suitable for use in both flooring and wall insulation.

### **4. Protective Padding**

This fabric is used as protective padding in various applications, such as packaging delicate items for shipping or storage. Its cushioning properties help to prevent damage during transport.

### **5. Furniture and Upholstery**

In furniture making, black underfelt is used as a padding material. It is placed under the outer fabric of upholstered furniture to provide extra comfort and support, and to protect the fabric from wear and tear.

### **6. Automotive Industry**

The automotive industry utilizes black underfelt fabric in vehicle interiors. It is used for soundproofing, thermal insulation, and as a cushioning layer under carpets and seats to enhance comfort and reduce noise.

### **7. Bedding and Mattresses**

Black underfelt is sometimes used in the manufacture of bedding products, such as mattress pads and toppers, to provide additional cushioning and support for better sleep comfort.

### **8. Crafts and DIY Projects**

Crafters and DIY enthusiasts use black underfelt for a variety of projects, including creating custom padding for storage boxes, lining drawers, and making protective covers for tools and equipment.

### **9. Event Staging and Exhibitions**

In the event staging and exhibition industry, black underfelt fabric is used to create a professional and polished look. It is laid under temporary flooring to provide comfort and reduce noise in busy event spaces.

### **10. Acoustic Panels**

Black underfelt fabric is used in the construction of acoustic panels for recording studios, home theatres, and office spaces. These panels help to absorb sound and reduce echo, improving the acoustics of the room.
