Product code: KBT13429
Selected Colour: Alpha Red
Width: 138cm
Price: £11.99/mtr

Description:

- Display Brushed Nylon Hook Receptive Fabric refers to a specialized type of fabric designed for use in displays where hook-and-loop fastening systems (like Velcro) are utilized. This fabric is constructed using brushed nylon, which enhances its durability and texture. The term "hook receptive" indicates that this fabric is compatible with the hook side of hook-and-loop fasteners, allowing for easy attachment of various display materials such as posters, signs, or graphics. This fabric's properties make it an ideal choice for creating versatile and reusable display setups in various settings, including trade shows, exhibitions, retail environments, and educational institutions.

Here are some potential uses for this type of fabric:

1. **Display Boards:** It can be used as a surface material for display boards or panels where items can be attached using hook-and-loop fasteners. This is commonly seen in trade shows, presentations, or educational settings.
2. **Wall Organizers:** This fabric can be incorporated into wall organizers or bulletin boards where notes, photos, or other items can be easily attached and removed using hook-and-loop fasteners.
3. **Craft Projects:** Crafters may use this fabric as a base for various projects where items need to be temporarily attached and removed, such as fabric wall hangings, interactive displays, or customized organizers.
4. **Educational Materials:** Teachers and educators might use this fabric to create interactive

learning materials, such as tactile displays or charts where students can attach items to demonstrate understanding or interact with the content.

5. **Retail Displays:** Retailers could utilize this fabric in displays for showcasing products that need to be easily rearranged or replaced, such as clothing, accessories, or small items.
6. **DIY Projects:** Hobbyists and DIY enthusiasts might incorporate this fabric into various projects where a versatile, reusable attachment method is needed, such as custom bags, pouches, or organizers.
7. **Medical and Rehabilitation Equipment:** In medical settings, this fabric could be used in equipment such as orthopedic braces or splints, where adjustable straps and attachments are necessary for customization and comfort.
8. **Costumes and Apparel:** Costume designers or apparel makers might use this fabric in garments where removable attachments or accessories are required, allowing for versatility in design and styling.
